PROFESSIONAL SUMMARY

Cybersecurity student focused on SOC operations and blue-team security, with hands-on practice using SIEM tools for log monitoring, detection-rule configuration, alert investigation and triage, and IOC analysis. Seeking SOC Analyst / Security Operations internship and entry-level opportunities.

EDUCATION

HRIT University — B.Tech, Computer Science and Engineering | 2025–2029

EXPERIENCE

CyArt Tech — SOC Analyst Intern | 10 Aug – 10 Dec 2026 | Remote

- Contributed to the Security Baseline Checker capstone using Python and YAML to assess system and application configurations against secure baselines.
- Darktrace: Tested user flows, identified UI and integration issues, supported bug fixing, and focused on application stability and clear threat-information presentation.

Unified Mentor Private Limited — Cyber Security Intern | 15 Jan – 15 Apr 2026 | Remote

- Worked on simulated enterprise security projects, including Linux privilege-escalation checks for SUID binaries, weak permissions, and cron misconfigurations. Contributed to SentinelShield, an intrusion-detection and web-protection project involving traffic monitoring, anomaly detection, and alerts.
- Recognised as a Top Performing Intern and awarded ₹5,000 for my performance.

Cyber Shield Center (CSC), HRIT University — Tech Lead | Dec 2025 – Present

- Led student cybersecurity learning initiatives, hands-on labs, CTF practice, and cybersecurity awareness.

PROJECTS

VULNEX — Python Vulnerability Assessment and Reporting Tool

- Developed a Python-based vulnerability assessment tool integrating Nmap scanning, risk scoring and automated PDF report generation.

Secure File Transfer Monitoring System

- Developed a monitoring solution to log file-transfer activity, detect potentially unauthorized movement, and verify file integrity using SHA-256 hashes.
- Emphasized monitoring and integrity verification without claiming unverified performance metrics.

HANDS-ON LABS

- **TryHackMe** — Hands-on labs on SIEM, log analysis, incident response, and MITRE ATT&CK framework
- **Basic SOC Simulation (Home Lab)**- Set up Wazuh and monitored simulated logs for suspicious behavior- Created basic alerts for brute-force patterns and port scans.
- **OverTheWire Bandit** — completed the Linux command-line and privilege-escalation challenge wargame.

SKILLS

- **SOC Tools:** Splunk, Wireshark, Wazuh, Microsoft Sentinel, SIEM correlation rules, Malware Analysis
- **Cybersecurity:** Log Analysis, Threat Detection, OSINT, alert triage, IOC analysis, Windows Event Log Analysis, Active Directory fundamentals, EDR / Endpoint Monitoring, Incident Escalation, Phishing Investigation, MITRE ATT&CK mapping
- **Networking:** TCP/IP, Firewalls, IDS/IPS
- **Operating Systems:** Windows, Linux (Kali, Ubuntu), macOS
- **Scripting:** Basic Python for automation
- **Other:** Ticketing / Incident Documentation**,** Report Writing, Documentation, Team Collaboration
